

Subject: Unistrut fittings on HEALY

To those concerned with the Seattle load and set up

The Coast Guard has informed us that there is a limited supply of unistrut fittings - spring loaded nuts, hangers, eye bolts, etc. They do NOT have many/any of these and we must bring our own. Please purchase/obtain, and ship unistrut fasteners that you will need for your equipment and setting up things like the main lab bubble. The national company Fastenal has the spring-loaded nuts, which are hard to find (do a search for unistrut nuts); all the rest are 3/8-16, etc eye bolts, etc.

Best

Dave
